

2015 SWS Announces Smart Earth Technologies as Winning the Best Smart Water Product and Solution Award

Palm Springs, CA. – September 28th. The 2015 Smart Water Summit (SWS) and [Zpryme](#) announces Smart Earth Technologies, Rachio and Neptune Technology Group as award winning vendors at the second annual SWS held September 20-22, 2015 at the Omni Rancho Las Palmas Resort & Spa.

Forty-three participating smart water technology vendors competed for three award categories (Best Smart Water Solution, Smart Water Vendor to Watch and Best Overall Boardroom Presentation). Awards were voted on by one hundred utility executives representing some of the most progressive water utilities in North America.

[Smart Earth Technologies](#) was awarded the **2015 SWS Best Smart Grid Product and Solution** award. Smart Earth Technologies (SET) designs and manufactures an advanced wireless water valve that enables water utilities to avoid expensive truck rolls associated with water disconnects and connects. Using cellular and cloud software solutions, the SETflow water valve platform saves utilities time and money by offering the technology as an optional service that allows utilities to pay-as-they-turn, or as a small monthly service fee, and thus avoiding any upfront costs or risks associated with new technology purchases. The top three vendors nominated for the Best Smart Water Product and Solution award were Smart Earth Technologies, Master Meter and Specific Energy.

The [Smart Grid Summits \(SGS\)](#) consist of four annual utility business development events called the Municipal Smart Grid Summit (SWS), the Smart Water Summit (SWS), the Rural Smart Grid Summit (RSGS) and the Gas Utility Summit (GUS). As exclusive and invitation only events, the SGS produce private boardroom format events that offer participating technology vendors access to the executive leadership of North America's public power, rural electric cooperative, gas and water utilities. Technology companies interested in participating in the 2015 Rural Smart Grid Summit should contact Colin Martin at cmartin@smartgridsummits.com or by phone at (864) 751-4812.
